Renewing New York's Highway Infrastructure
The upkeep of New York’s 113,000 miles of roads and 17,000 bridges is the largest component of the state’s five-year transportation capital program, which must be updated soon. That makes this an ideal time to address such questions as the following:

- What is the condition of New York’s state and local highway system?
- Is New York’s dedicated transportation fund capable of adequately supporting the next capital plan?
- How have the Thruway Authority’s finances been affected by construction of the new Tappan Zee Bridge?
- What’s in the latest federal transportation bill “patch” for states like New York?
- Can technological innovation help the state meet its infrastructure needs in the context of exceptionally tight fiscal constraints?
- What are our options for financing road and bridge capital projects in the future?
- What role could public-private partnerships (PPP) play in renewing New York’s highway infrastructure?

Leading transportation policy experts will be offering answers — and you are invited to join us for what promises to be an enlightening half-day conference.
